

30-Day Time-Release Scale Control

Cooler Guard is a 30-day time-release sump treatment that releases descaling and dispersing agents into circulating water, keeping minerals in suspension and preventing scale from forming on cooler pads.

CONTROLS SCALE | SAVES WATER | 30-DAY PROTECTION

How does scale affect Cooling Pads?

Mineral scale forms as water evaporates, leaving solids that embed into cooler pads. This buildup restricts airflow and reduces cooling efficiency. Cooler Guard keeps minerals in suspension as water circulates, preventing scale from settling and helping maintain pad performance, and extending pad life.

Protection Benefits

Continuous Scale Control

Time-release formula works for 30 days in the sump reservoir.

Minerals in Suspension

Prevents scale from embedding in cooler pads.

Water Savings

Allows operation with the bleed-off valve turned off.

Improved Performance

Maintains airflow and cooling efficiency.

The best defense against evaporative cooler scale
