

# First Strike MICRO COAT

## The Invisible Shield for HVAC Coils

First Strike Micro Coat is a long-lasting protective coating that helps keep evaporator coils cleaner, more efficient, and free from odor-causing buildup.

PROTECT COILS | REDUCE ODORS | IMPROVE EFFICIENCY

### Clean coils don't stay clean for long

After cleaning, microscopic biofilm begins rebuilding almost immediately. As buildup accumulates, airflow is restricted and heat transfer declines. Reduced heat transfer forces HVAC systems to work harder, increasing energy consumption, straining components, and accelerating wear.

## Protection Benefits

### Less Buildup

Water-sheeting barrier repels dirt, grime, and airborne particles that normally stick to coils.

### Fewer Callbacks

Reduces maintenance needs throughout the year. Clean efficient coils prevent complaints.

### Lower Energy Costs

Prevents efficiency loss by preserving clean coil surfaces for maximum heat transfer.

### Annual Protection

One application lasts all year, reducing the number of cleanings, and extending the life of the coil.

Long-lasting coil protection for commercial and residential HVAC systems
