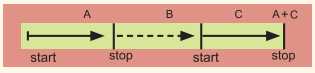
NINE UNIQUE TIMING FUNCTIONS

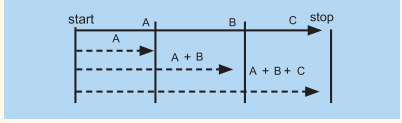
A.Single Action Timing: Pressing the start button begins timing, a second press stops the clock

B. Time-out/Time-in: Records total elapsed time with any number of time-outs. Permits stopping the timer for off periods, holds the reading where stopped, and starts again from that point.

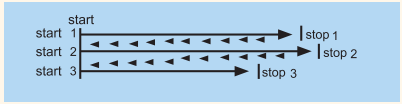


C. Continuous Timing: Digits offer a continuous display. When the maximum display is reached, digits rollover to zero and automatically begin timing again. Permits timing for hours, days, or weeks.

D. Cumulative Split: Freezes the display for partial event times while the internal clock continues to run and measure total elapsed time since starting the timer.

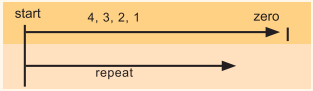


E. Interval Split: Yields a readout of each individual time increment of a connected series of events. Each press of the button displays the time interval since the previous press.



F. Memories: Capture and store separate times and display them while timing or after the event is over. Never look away from a lab test–even to take notes.

G. Countdown I (repeat): An alarm sounds at zero, program automatically repeats, counts down, and alarms again. It continues this sequence until stopped.



H. Countdown II: Allows setting unit to countdown. An alarm sounds at zero.

I. Sample Counter: Box on display shows sample number for each split taken.
