PRMP-SERIES PRESSURE RELIEF VALVES

Features:

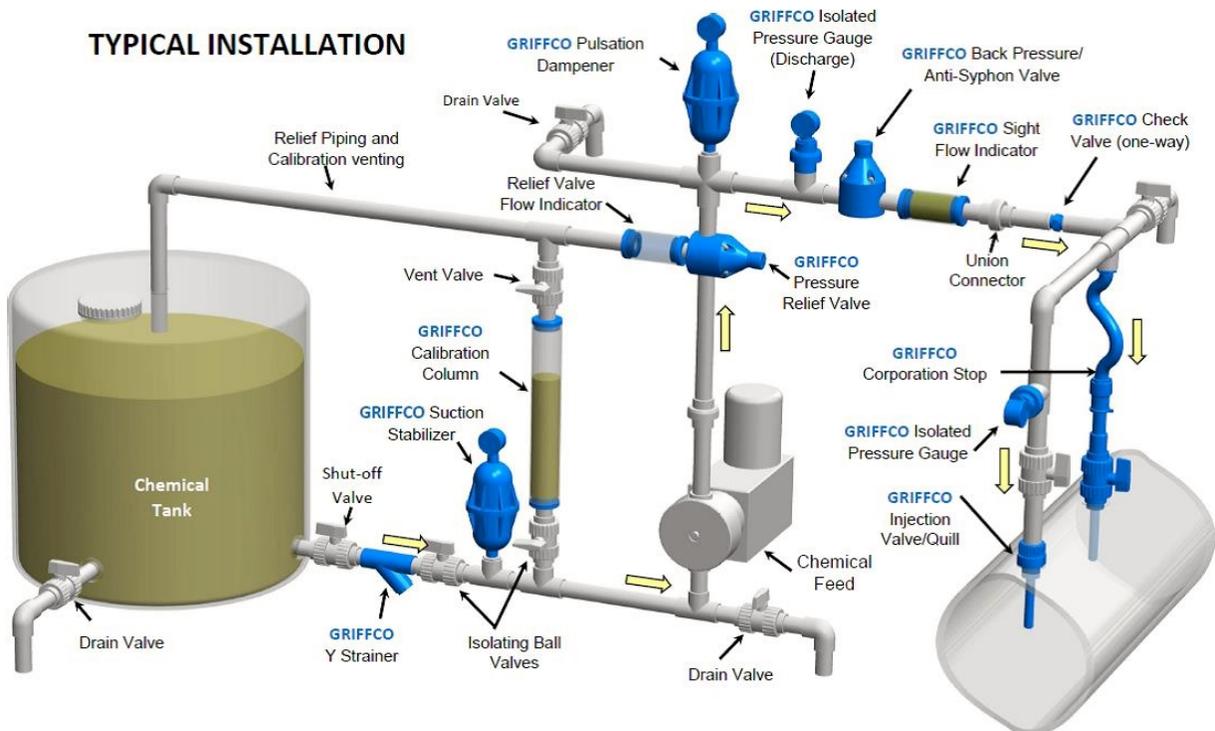

- 100 – 800 psi Pressure Range
- High Reliability/Low Cost
- Multiple Diaphragm Options
- Adjustable Pressure Range
- 2 and 3 Port Configurations
- Robust, Machined Construction
- Tamper Resistant Adjustment Screw
- Wide Range of Materials

Operation:

Griffco diaphragm pressure relief valves operate when the pressure in the chemical system exceeds the preset pressure of the valve. The diaphragm is held against the valve seat by an internal spring. When the pre-set pressure is exceeded the diaphragm is forced up and the chemical flows out the relief port, back to the chemical tank or to the suction side of the pump. The valves are pre-set at 250 psi, however they are field adjustable from 100 - 800 psi, via the adjustment screw. The relief valve should be set approximately 15 psi higher than the system pressure. Installation should be made as close to the pump as possible, without any valves or accessories between the relief valve and the pump. Consult your pump manufacturer for their recommendations.

Griffco PRMP-Series diaphragm pressure relief valves are designed to protect chemical feed systems from over pressure damage caused by defective equipment or a blockage in the chemical feed line. Robust construction ensures reliability in the rigorous service of municipal and industrial applications. Wetted materials include: 316 SS, A20, Hast. C and Titanium. Available sizes: 1/4" – 1".
