Technical Data	Sheet	Material Designation	JA - QUARTZ
Material Properties Summary	⊠ Binderless □ Org □ Acrylic Binder □ Larr	anic Binder 🔲 Double Laminate	ed
This microfiber depth filter contains binder-free quartz (SiO ₂) microfibers. High purity levels are due in part to the inherently low trace metal content of the quartz media. Quartz microfiber also demonstrates a very high heat resistance with a maximum temperature of 1000°C.			
Chemically resistant against all solvents, acids (except hydrofluoric acid) and basis. This filter media is ideally suited for laboratory filtration of aggressive media, trace analysis typical to environmental methods and conveyance of samples into and out of high temperature furnaces and environments.

Actual filtration performance, i.e. efficiency and dust holding capacity, will vary depending upon filter design parameters and the normal variation of the media properties consistent with the specification range. We continuously strive to define our products and hence the specifications are subject to change.
